## EDUCATION

### Colorado State University, Fort Collins Co — *Computer Science*

August 2020

Currently attending CSU as a Computer Science major with a concentration in Networking and Cybersecurity as well as a minor in Mathematics. I am currently in my third year and part of the College of Natural Science Learning Community.

## EXPERIENCE

### Advanced Auto Parts, Fort Collins Co — *Sales*

January 2022 - Present

I am currently working at Advanced Auto Parts as a Retail Parts Pro. I am responsible for helping customers with any issues with their vehicle. On top of that, I need to be able to address questions on what could be broken and help them make an informed decision. I oversee the front of the store and keep it running and effectively selling to the customers. I work under the store manager to make sure that the salespeople are well equipped to help in any way possible.

### Mod Pizza, Parker CO — *All-Star*

January 2019 - July 2021

I started off working at Mod Pizza as a Team Member by opening their new store located in Parker. I was able to quickly understand the complex requirements of the positions in the team. Once I turned 18, I was promoted to an All-Star position, which required you to be highly skilled in all aspects of the job. I also received mentoring on how to train new hires effectively. As an All-Star I was responsible for making sure new hires understood what each position required from them, as well as offering tips and tricks on how to work each position more effectively.

### King Soopers, Parker Co — *Cashier*

November 2017 - October 2018

I started off working as a Courtesy Clerk, responsible for bagging groceries, assisting customers, collecting carts, and cleaning the front of the store. I was then promoted to a Cashier, where I worked hard to make sure the customers had a good experience in the store and followed up to offer any advice on items they may have missed during their trip.

## SKILLS

- Leadership
- Adaptability and Flexibility
- Communication
- Scrum
- SQL
- GitHub
- Front End Development
- Test Driven Development

## Completed Computer Science Classes

- CS-164 Intro to Programming
  - Object-Oriented Programming
  - Java
- CS-165 Data Structures
  - Introduction to different data structures
    - Stack, Heap, Hashes, Linked List, BST, Graph, Table, etc.
  - Java
- CS-220 Discrete Structures
  - Introduction to creating algorithms
  - Python
- CS-253 Software Engineering
  - Begin creating more complex programs, and start working with our old code in new projects
  - C++
- C++ CS-270 Computer Organization
  - Introduction to the innerworkings of computer processors
  - C
- CS-314 Software Engineering
  - Introduction to team driven development
  - Semester long project that operated under the SCUM model
  - CMMI maturity progress
  - Full stack development on our own mobile web app
  - Node, ReactJS, JSON, JavaScript, Java
- CS-356 Systems Security
  - Introduction to the modern security systems used to protect apps and data
  - Introduction to network security and vulnerabilities
  - Deter Sandbox
  - Python, C++
- CS-370 Operating Systems
  - Process and thread management to allow for multithreading
  - Memory management
  - Virtualization
  - C++

## Current Computer Science Classes

- CS-312 Modern Web Applications
  - Introduction to best practices for web design
  - HTML, CSS, PHP
- CS-320 Algorithms—Theory and Practice
  - An advanced look at algorithms and how to optimize them to best fit the intended application
  - Python
- CS-464 Principles of Human-Centered Interaction
  - A course centered on how to research Human-Computer Interaction. Group research project including a course project, experiment, and paper in a small team
